DETAILED ACTION

1. This office action is in response to application 10/707,068. Claims 1-20 remain pending in the application.

EXAMINER'S AMENDMENT

2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Attorney Michael Lestrangle (Reg. No. 53,207) on 10/04/2005.

The application has been amended as follows:

3. Claim 4:

replace lines 1 and 2 with -- The method of claim 1, further comprising providing a preferred components file containing a library of components selected from a --.

4. Claim 5:

line 4, replace "the group" with -- a group --.

5. Claim 10:

lines 6, replace "in synthesized" with -- in the synthesized --.

6. Claim 14:

replace lines 1 and 2 with -- The method of claim 11, further comprising providing a preferred components file containing a library of components selected from a --.

7. Claim 15:

line 4, replace "the group" with -- a group --.

8. Claim 20:

lines 7, replace "in synthesized" with – in the synthesized --.

Allowable Subject Matter

9. Claims 1-20 are allowed over prior art of record.

10. The following is an examiner's statement of reasons for allowance:

The prior art of record fails to teach or suggest or render obvious:

a method for designing an integrated circuit having multiple voltage domains, comprising generating a logical integrated circuit design from information contained in a high-level design file, said high-level design file defining global connection declarations and voltage domain connection declarations; synthesizing said logical integrated circuit design into a synthesized integrated circuit design based upon said information in a voltage domain definition file and a design constraint file; generating a noise model from said synthesized integrated circuit design based on information in said voltage domain definition file, a circuit level profile and a design constraint file; and simulating said noise model against constraints in said design constraint file and constraints in a circuit level profile file to determine if said synthesized integrated circuit design meets predetermined noise targets.

11. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should
